## **Health Management for Dairy Cows: Easier, Faster and more Customized**

*The smaXtec interface is now more customizable to meet the unique needs of each individual farm*

MADISON, WI [June 18, 2025] – The latest update from smaXtec makes herd health management more personalized, intuitive and efficient. The software now known as smaXtec Web fits seamlessly into daily dairy operations – rather than the other way around. At the core of the system, the artificially intelligent digital assistant helps farmers monitor their herd and simplifies day-to-day tasks with automated reports, practical lists and clear action recommendations.

The completely redesigned user interface now displays key information in a clearer and more accessible way. The graphs are easier to interpret, navigation is more straightforward and overall usability has significantly improved. This saves time and allows farmers to focus on what matters most.

*“The graphics and layout present the data in a clear colorful form. The addition of dark mode really highlights the data and the new customizable layout focuses your attention to the reports that matter the most,”* says Chad Butts from Willow Breeze Farm in New York.

### **As unique as each farm**

A quick glance at the dashboard is all it takes to see the new updates made. The refreshed dashboard displays the same powerful insights with a now customizable interface. Users can prioritize the most important herd details for their farm. Paired with an easily accessible navigation bar featuring the AI-powered digital assistant, users can access herd information faster than ever. smaXtec Web keeps farmers one step ahead and delivers the right insights at the right time.

*“From development to customer support, our mission and focus is always the farmer,”* emphasizes smaXtec CEO Stefan Scherer. *“That’s why we’re upgrading our system to be more personal, intuitive and powerful than before.”*

What drives smaXtec forward? Ongoing improvements are driven directly by insights and feedback from real farmers. smaXtec continues to strive for a better future by implementing customer feedback into smart solutions and innovations.

**About smaXtec**

smaXtec is the market leader in digital health management for dairy cows. With cutting-edge sensor technology and smart software, the system helps dairy farmers detect diseases and potential health issues long before clinical symptoms appear. The result is consistently high milk production, significantly reduced antibiotic use, lower vet costs, plus a boost in both animal welfare and farm profitability. By combining highly accurate data – captured using revolutionary bolus technology from inside the cow – with artificial intelligence, smaXtec enables faster, more targeted decision-making. The integrated digital assistant streamlines daily tasks and workflows, making dairy farm operations more efficient. smaXtec helps ensure the long-term stability and profitability of dairy farming worldwide.
